- Position & Direction

RE

Our world

Science

Living things and their habitats.

All living things (organisms) have to do certain things to stay alive. These are seven life processes: movement, respiration, sensitivity, growth, reproduction, excretion and nutrition.

Living things can be grouped according to different criteria (where they live, what type of organism they are, what features they have).

A classification key is a tool that is used to group living things to help us identify them.

Habitats can change throughout the year and this can affect which plants and animals live there.

Humans can have positive and negative effects on the environment: positive effects can be nature reserves, ecological parks and negative effects can be litter, urban development.

Jigsaw

Changing me

Caring for the local environment
What can effect the environment?

Geography

The children will be learning about .

Geographical skills and fieldwork

- Human and physical features in the local area using a range of methods, Including sketch maps, plans and graphs, and digital technologies.
- Recycling using materials again
- Different ways to improve the local area

English

Communication—newsletter

Biography

Persuasive advert

Classic poetry

D&T

We will be making and sewing bags with recycled materials

Computing

The children will be learning about programming sphero balls

Thorpepark 50

17. What can you do in your local area?

39- Know my times tables
