What makes a Saint?

Science

Animals including Humans

- A food chain is a simple way to show the direction in which energy moves from the producer to the various consumers to the top or tertiary consumer.
- When part of the food chain is removed, this has an impact on the other parts of the food chain. The number of some species will increase, while the population of others will decrease.
- The population of tertiary consumers depends on healthy populations of producers, primary and secondary consumers.
- A predator is an animal that kills and eats other animals.
- A food web shows the direction in which energy travels when animals and producers (plants) are eaten by more than one thing it can include multiple food chains where there are multiple feeding relationships.

Compare and contrast

**European comparison
Naples and Hull**

Geography

There are 44 countries in Europe.

-Naples is near Mount Vesuvius and is on the Amalfi coast.

-Naples has a warmer climate compared to Hull.

Hull exports, caravans, fish and wind turbines.

In Naples they make wine, grow tomatoes to make pasta sauce

Tourism brings money into a country.

Thorpepark 50
